

The Black Ice® CPX Personal Cooling Pack™ – Effective Personal Cooling Is Just 20 Minutes Away.

The heart of the Black Ice Cool Collar CCX Personal Cooling System, the CPX Personal Cooling Pack provides cool and refreshing relief for up to 1.5 hr.

Just charge the pack in a freezer, refrigerator or ice water, attach it to your CoolSwap wrap with the built-in hook and loop fasteners, and enjoy cool and refreshing relief in the hottest of conditions.

The CPX includes the unique CoolValve™, giving you Dynamically-Balanced Cooling™ for even more comfort. If one of your pack sections discharges faster than another, simply give the adjacent sections a firm but gentle squeeze. The CoolValves will open and slowly meter the coolant into the section (***be careful not to force too much coolant into any one section**). Once you have made your adjustments, immediately place the CPX in ice water. In only twenty minutes, your CPX will be recharged and custom-balanced to your individual cooling requirements. That's not just cool—That's very cool.

INSCP

The CPX is 100% compatible with all Black Ice CCX Personal Cooling Systems.

*Black Ice LLC is not responsible for seal failures due to overly aggressive squeezing!

Black Ice
be cool. be very cool.®
